

# See degradation before it becomes downtime

BOOK A DEMO

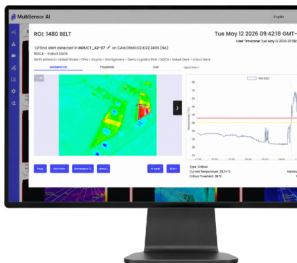

Catch electrical and mechanical degradation that develops between inspection cycles with continuous, multi-sensor condition intelligence on the assets you can't afford to go down.

## MSAI Connect helps reliability teams catch degradation at the source — not react to surprise breakdowns.

- **Protect throughput on single-point-of-failure assets** like conveyors, sorters, motors, switchgear, cooling systems
- **Eliminate inspection blindness** with continuous, 24/7 thermal, vibration, and visual signals
- **Cut alert fatigue** through multi-sensor corroboration for high-confidence alerts, not noise
- **Shorten MTRR** with targeted degradation detection
- **Avoid downtime costs** ranging from \$12k - \$5M per incident

**Built for distribution centers, parcel hubs, cold storage, airports, and data centers.**

## Works with PLC, DCS, SCADA, and CMMS

MSAI Connect complements your existing reliability stack, adding continuous degradation detection and cross-site condition visibility without altering control logic or requiring rip-and-replace.

**Operational Execution & Workflow**  
CMMS, Control Room Dashboards, Alarm Consoles

 **MultiSensor AI**

Electrical Fault Detection, Automation Control & Drive Faults, Rotating Equipment Degradation

**Control & Monitoring Systems**  
PLC, SCADA, BMS, VMS, DCS

## From reactive monitoring → To continuous condition intelligence

Traditional Monitoring	With MSAI Connect
Disconnected dashboards	Unified condition intelligence
Periodic inspections	Continuous, real-time asset visibility
Threshold-based OEM alarms	Early degradation detection before failure
Single-sensor monitoring	Multi-sensor signal corroboration
False alarms and alert fatigue	Expert-calibrated, high-confidence alerts
Reactive emergency maintenance	Scheduled maintenance during controlled downtime

**Shift from fragmented monitoring and emergency fixes to continuous visibility and proactive interventions on the conveyors, sorters, switchgear, and cooling systems your operation can't afford to lose.**
